About Me

AQA that uses his passion for programming, analytical thinking and attention to details to find problems and deliver top quality products.

Skills

Python	3+ years
Git & Github	3+ years
Pytest	3+ years
Jira	3+ years
Test case & planning	3+ years
REST API	2+ years
Regex	2+ years
SQL	1+ years
Selenium	1+ years

Education

Gheorghe Asachi Technical University of Iași

Bachelor's degree 2016 - 2020

Experience

GlobalLogic Romania

Automation tester March 2022 - Present

Validated features on a desktop application which updated and tuned the hardware of a electric vehicle, by implementing automated tests that verify the UI, functionality and API.

I was involved in updating and maintaining the CI/CD pipeline, which would improve the efficiency of automation by allowing us to run tests on multiple computers in parallel.

What additions I've brought to the framework:

- Integrated video recording app (OBS) into the framework, for better visualization and easier debugging. Os.system was used for manipulating OBS & the videos.
- Added regex validation to input fields, for a more granular control over the accepted values.
- Expanded the stability of tests by:
  - Integrating a rerun (of failed tests) library
  - Enabling running of the test suites on any build version, for project's application.

Projects & Courses

Projects

- Web scrapper that searches on Emag a specific product, using the website's filters, and returning the results as a Windows notification

Courses

- Udemy
  - Python Complete Masterclass for Beginners
  - Selenium WebDriver with Python Crash Course
  - The Git & Github Bootcamp
- Linkedin Learning
  - Selenium Essential Training
  - Python Essential Libraries
  - Learning Git and Github
  - Introduction to Web APIs
  - Learning Regular Expressions (2019)
  - SQL Server Fundamentals: Master Basic Query TechniquesSQL
