## About Me

I'm an AQA with a strong passion for programming, analytical thinking, and keen attention to detail, committed to identifying defects and delivering high-quality products.

## Skills

| | |
|---|---|
| Python | 4+ years |
| Git & Github | 4+ years |
| Pytest | 3+ years |
| Jira | 3+ years |
| Test case & planning | 3+ years |
| REST API | 2+ years |
| Regex | 2+ years |
| SQL | 1+ years |
| Selenium | 1+ years |

## Education

Gheorghe Asachi Technical University of Iași

Bachelor's degree 2016 - 2020

## Experience

### GlobalLogic Romania

*Automation tester* March 2022 - Present

Developed and maintained automated UI and API tests for a desktop application used in the updating and calibration of electric vehicle hardware.

Contributed to the update and maintenance of the CI/CD pipeline, enabling parallel and remote test execution across multiple machines to improve automation efficiency.

Key contributions to the Automation Framework:

- Integrated OBS for video recording, enabling better test visualization and simplified debugging; utilized os.system to control OBS and manage video files.
- Implemented regex validation for input fields, allowing more granular control over the accepted values.
- Improved test stability and flexibility by:
  - Adding a rerun mechanism for failed tests using a dedicated library.
  - Allowing test suites to run against any build version by specifying the version in GitHub Actions and automating its download.

Skills: python, pytest, git, REST API, regex, Github Actions

## Projects & Courses

### Projects

- *Selenium web scraper* - Implemented a web scraper for Emag that searches for a specified product, compares item names and prices against predefined values, and sends matching product links via Windows notifications.
- *Playwright webpage testing* - Created a Playwright-based testing project as a learning exercise to explore UI and API automation. Leveraged codegen to test a mock coffee e-commerce site, covering the full order flow: adding items to the cart, placing an order, and verifying order details. Also tested user registration using a mocked email, provided by MailSlurp.

### Courses

- Udemy
  - Python Complete Masterclass for Beginners
  - Selenium WebDriver with Python Crash Course
  - The Git & Github Bootcamp
  - SQL for Data Analysis: Beginner MySQL Business Intelligence
  - Playwright PYTHON Automation Testing
  - Postman: The Complete Guide - REST API Testing
  - Python for DevOps: Mastering Real-World Automation
- Linkedin Learning
  - Learning Git and Github
  - Introduction to Web APIs
  - Learning Regular Expressions (2019)
